TRANSIT GLASS & ALUMINUM LTD.

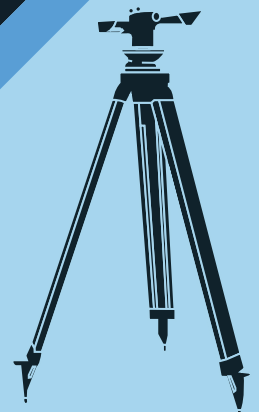

Celebrating 20 years

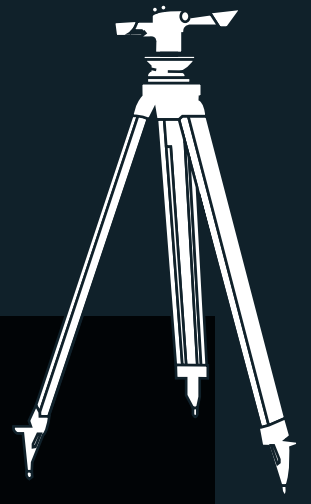

Transit Glass has forged a reputation as a leading glazing partner in Ottawa's rapidly growing construction industry adapting to the constant evolving demands in quality, energy efficiency, safety and technology.

Formed in 1999 by Bill Byers as Company President and Denis Sicard as Secretary Treasurer, Transit Glass has grown over the years to now employ over 50 full time staff.

Our portfolio of completed projects include everything from the iconic Canadian War Museum to hospitals, office towers, shopping malls, schools and art centres.

Our manufacturing and installations include glazed curtain walls, windows, aluminum entrance systems, glazed skylights as well as complicated glazed balustrades and custom interior glazing assemblies. Our in-house 3 dimensional scanning process allows us to accelerate custom glazing applications and minimize lead times on deliverables to projects saving the client both valuable time and money.

3D Point Cloud Scanning

Our in-house 3D scanning allows us to take a snap shot of the physical structure at the early stages of construction with Point Cloud software. We then integrate into an AutoCad file that allows us to order long lead time items. This is a way Transit Glass avoids excessive layouts and templating for complicated areas such as complex structures or glass stairwells - saving the projects weeks of costly delays.
